SKILLS

Data Engineering

- Azure Databricks
- Azure Data Factory
- Unity Catalog
- Delta Lake
- Data Modelling
- ETL/ELT
- Medallion Architecture
- dbt
- Power BI

AI & Dev Tools

- Claude code CLI
- MCP (Model Context Protocol)
- Cursor IDE
- N8n
- Mermaid Diagrams
- VS Code
- GitHub
- Azure DevOps

Programming

- SQL
- Python
- DAX
- SAP ABAP

CERTIFICATIONS

- **Databricks Data Engineer Associate**
Valid: Jun 2026
- **Microsoft Power BI Data Analyst Associate**
Valid: Dec 2026

EDUCATION

Bachelor of Electrical Engineering (BE)
1999 – 2003

LANGUAGES

English - Fluent
Swedish - Basic (Learning)

Data Engineer/Analyst with 3+ years of experience in building and maintaining cloud-native data pipelines and data models using Azure Databricks, SQL & Python and visualize in Power BI. Recently focused on AI-assisted Data Engineering, automation and Databricks modernization projects using Claude CLI, MCP and modern data platform practices.

Work Experience

Professional Development / Independent Projects

Feb 2026 – till date

- Built a zero-cost AI newsletter automation pipeline using self-hosted **n8n** (Docker) integrated with Claude Code via MCP server and using skills to autonomously generate, validate and deploy **multi-agent workflows** from natural language prompts. [N8nworkflow](#)
- Built an AI-assisted labor rights analytics application using **Lovable** to visualize and explore workforce and gender equality datasets. [Lovable](#).
- Built a **Claude Code + MCP automation tool & Cursor IDE** that **generates Spark Declarative (DLT) pipelines, Dashboards and technical documentation** from prompts - reducing pipeline scaffolding from hours to minutes.
Published on GitHub: [GitHub-SDP_AI](#).
- Automated **GitHub workflows using Claude Code**, including branch management and commit documentation generation - demonstrating practical application of AI agents in data engineering delivery.
Published on [LinkedIn Post](#).
- Implemented **AI document parsing in Databricks** to transform multi-format PDFs into analytics-ready structured datasets.
Published on GitHub: [GitHub-IDP_AI](#)
- Developing an independent research project :AI-assisted Databricks Migration [Sql-to-dbx-Migration](#) and auto generated Power BI reports using CLI .
- **Actively Learning Swedish** through structured online courses and self-study to strengthen professional communication in the Swedish market.

Bytespoke - Client (Swedbank)

Aug 2025 - Jan 2026

Consultant - Data Engineer

Stockholm, Sweden

- Engineered cloud-native data pipelines on **Azure Databricks** using Spark SQL and Lakehouse following **Medallion Architecture** (Bronze/Silver/Gold) to structure data models (DV 2.0 and Kimball dimensional model)
- Formulated config-based declarative, metadata-driven pipelines (**DLT**) with built-in data declarative, metadata-driven with built-in data quality rules, high watermarking and transformations.
- Developed and Tested Spark SQL code locally using VS Code & used **Databricks Asset Bundles (DABs)** to synchronize changes with GitHub repository.
- Technical documentation using **Confluence, Markdown files** and **Mermaid**.
- Established **GitHub branching strategy** (feature → develop → main) to manage code promotion across environments.
- Supported migration of **dbt** transformation logic to Databricks, gaining hands-on exposure to dbt models, macros, snapshots and testing. Demo in GitHub: [GitHub-dbt project](#)
- Collaborated with cross-functional teams to support modelling and development of data products.

ADAGE

Sep 2021 - Oct 2024

Consultant - Data Engineer/Analyst

Stockholm, Sweden

- Built **ELT pipelines in Azure Data Factory (ADF)** to ingest and transform HR data from SAP SuccessFactors, shifting data availability from monthly batches to daily refreshes and cutting report retrieval time by 40%.
- Designed **conceptual, logical, and physical data models** to support HR analytics -structuring a data warehouse that served workforce reporting across 3 business departments.
- Developed and deployed interactive **Power BI dashboards** covering employee demographics, performance, and retention KPIs (headcount trends, diversity ratios, turnover rates) - used across 3 departments by HR and leadership teams for workforce decisions.
- Applied SQL for data cleansing and exploratory **HR analytics** - including attrition risk modelling and employee segmentation by engagement levels to support retention strategies.
- Worked on Workforce scheduling & Planning reports.
- Automated scheduled pipeline runs and Power BI report refreshes using DAX and Power BI Service, enabling HR and leadership teams to **access up-to-date workforce insights daily** without manual intervention.
- Worked within an Agile (Scrum) team using GitHub and Azure DevOps for version control and sprint delivery.

Cognizant Technology Solutions

Apr 2010 - Dec 2012

Software Engineer – SAP ABAP

Pune, India

- Worked as developer across multiple projects in SD, MM & PP Modules.
- Created and modified ABAP Repository objects: Function Groups, Reports, Module Pool programs, Screens, Tables, Views and Smart forms.

SOPRA India

Jun 2008 – Jan 2009

Software Engineer

Noida, India

- ABAP Repository: Created and modified objects like Function Groups, Reports, Screens.
- Worked as developer across multiple projects in FI & MM Modules.

HPM Group

Nov 2005 – May 2008

SAP ABAP Developer

New Delhi, India

- ABAP Repository: Various reports in FI, MM & SD module.
- Data Configuration and Data Migration.
